Designing technology that frees you from technical tasks

With the Altivar 12, you get greater reliability and simplicity of operation and save even more time for all your applications.

- The smallest drive with integrated EMC for compact machines
- Ever more intuitive and user-friendly programming and menus
- Can be configured in complete safety with the power off, even in its packaging
- A design that can withstand even the harshest environments
- Quick and simple to set up
- With no compromise on quality, and components designed to last 10 years

Collaborative design

We surveyed our customers and users to determine their needs. The result is the innovative Altivar 12.

Make the most of your energy

Combining efficiency with intelligence

The Altivar 12 is particularly suitable for use in applications involving simple industrial machines or certain consumer machines. Its compact size, high performance and discreet appearance make it particularly attractive for use in the following sectors:

- The food industry (ventilation of catering kitchens, bagging machines, bakers' kneading machines, greenhouses, etc.)
- Small handling applications (car washes, conveyors, etc.)
- The medical and health sector (medical beds, fitness machines)
- Machines with a single-phase socket (wood-working machines, surface polishing and cleaning machines, swimming pool or irrigation pumps, hydromassage bathtubs, etc.)
- New markets (solar applications, etc.)
- Simple mechanical applications (2-speed motors, DC motors, mechanical drives, etc.)

A design focussed on integration

- Upgrade your machines and make them more competitive: with its advanced functions (integrated PID, multi-speed) the Altivar 12 increases your productivity
- Communicate easily with all the other parts of your machine via the integrated universal Modbus serial link
- Reduce the depth of your equipment: the baseplate mounted version dissipates heat into the machine frame

Small

The small format and advanced functions of the Altivar 12 mean that it can easily replace any existing drive in its category.

Economical

- Design: Save time by using the SoMove software workshop
- Commissioning: Quicker configuration with the power off download function
- Wiring and mounting: Quicker and easier installation with integrated Modbus communication

Choose peace of mind

The Altivar 12 integrates as standard all the technologies that will make you forget it is there. Its design and choice of components make the Altivar 12 an extremely efficient, reliable and durable drive.

No compromise on quality

- Ever higher performance for your motors assured by:
 - The factory settings, which provide a high quality drive from the very first time the power is turned on
 - The integration of Standard (U/f), Performance (sensorless flux vector control, or SVC) and Pump/Fan (quadratic profile Kn^2) control profiles
 - High dynamic performance on acceleration as well as on braking
 - Excellent speed regulation on machine load surges
- Reduced noise and maintenance:
 - No fan on models up to 0.75 kW at 240 V
 - Cassette type fan, operates automatically on detection of specific temperature setting
- Designed for easy fitting and wiring of the drive:
 - A single tool
 - Power terminals not tightened, ready for wiring
 - Easy access angles
 - Numerous, easy to identify markings
- Fast detection and protection against the motor current peaks associated with certain applications (motor switching, catching on the fly, etc.)
- Perfect integration of single-phase 240 V model into the electrical network thanks to its built-in EMC filter

The fan, which is the only wearing part, can be changed without the need for any tool.

Practical, recyclable packaging. You can configure your product in its packaging without breaking the guarantee seal.

Sturdy

- New generation long-life components (10-year service life under normal operating conditions)
- Cards are coated as standard and resistance to disturbed power supplies has been increased to withstand harsh environments

Easy to identify

- All the identification markings on the product are on a hinged door on the front panel
- Easy identification of the connections

Ecological

- An average of 30% energy savings (with the Pump/Fan control profile) for the majority of applications
- Less cardboard to be recycled - only one box is used for bulk orders

Communicate intuitively with all your applications

The Altivar 12 is immediately operational. It is configured using the notched wheel or from the SoMove software workshop. The file that is generated can be downloaded to the product even while it is still in its packaging, using the Multi-Loader console. You save commissioning time so that you can spend more time doing your job.

Save time on commissioning

- The drive can be configured before it is received (by the distributor), during storage (by the storekeeper) or during fitting before the electrical enclosure is powered up for the first time
- No adjustment is required and there is a quick start guide for immediate setup
- Work in the language of your choice with the SoMove software workshop that can be downloaded free of charge from www.schneider-electric.com
- Select the functions you need from the menu
- Bluetooth option for PC for greater ease of use

Save time on wiring

- Easy access to all the wiring and adjustment functions on the front panel via a sealable hinged door
- Integrated EMC filter in 240 V single-phase versions
- No need to remove the terminal cover to wire the power section
- Only one screwdriver needed for wiring both the control and power sections
- Less wiring due to the integrated Modbus communication

Save time on programming

- A navigation button for easy menu access: you can set the parameters of your application with just a few clicks
- A three-level tree structure
 - Reference Mode: In local operation (On/Off buttons) and for speed adjustment and display
 - Monitoring Mode: For displaying parameters
 - Configuration Mode: For configuring your applications and settings

Use SoMove to customise your menus and save time during operation (possible for up to 25 parameters)

Fast

With the Multi-Loader console you can configure 10 drives in their packaging in less than 5 minutes, with no power supply!

Versatile

The Altivar 12 range is designed for 120 to 240 V power supplies. For your productivity requirements in the most varied applications, see the complete Altivar® range on our website: www.schneider-electric.com

ATV12 controlling an access barrier

ATV12 controlling a mixer

Presentation

The Altivar 12 drive is a frequency inverter for three-phase 200...240 V asynchronous motors rated from 0.18 kW/0.25 HP to 4 kW/5 HP.

The Altivar 12's ease of installation, based on the principle of Plug&Play, its compact size, its integrated functions and its alternative base plate version make it particularly suitable for applications involving simple industrial machines and certain consumer machines.

By taking account of the constraints governing installation and use at the product design stage, we have been able to offer a cost-effective solution to manufacturers of compact simple machines (OEMs) and installers.

Examples of solutions provided:

- Drive factory-configured for start-up without the need for any adjustment
- Multi-Loader configuration tool for loading a configuration onto the drive without taking it out of its packaging
- Labelled terminals to reduce wiring time; drive identification on the front panel
- Alternative delivery option of multiple units in a single special package (1). Like with the individually-shipped drives, it is possible to load a configuration into each drive without taking them out of the packaging.

Applications

Applications for simple industrial machines

- Handling (small conveyors, etc.)
- Packaging (small labelling machines, small bagging machines, etc.)
- Pumping applications (suction pumps, centrifugal pumps, circulating pumps, mono-pump and multi-pump stations, etc.)
- Machines equipped with a fan (air or smoke extraction, plastic film making machines, ovens, boilers, washing machines, etc.)

Applications for consumer machines

- Handling (access barriers, rotating advertising hoardings, etc.)
- Machines for health-related areas (medical beds, hydromassage equipment, running machines, etc.)
- Food and beverage industry machines (mills, kneading machines, mixers, etc.)

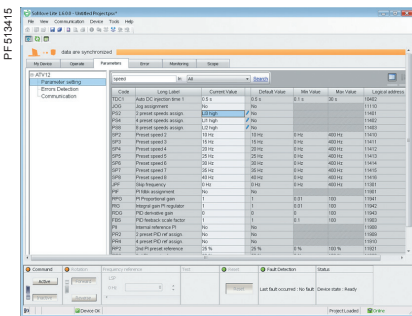

Other types of application

- Food and beverage industry (battery farming, greenhouses, etc.)
- Miscellaneous applications (mobile machines and small appliances equipped with a power socket, etc.)
- Applications which traditionally use other solutions:
 - 2-speed motor, DC motor, mechanical drive, etc.
 - Single-phase motor for pump and fan applications using mechanical control; the "Altivar 12 + three-phase motor" solution adapts the power to the requirements of the driving application, thus reducing energy consumption.

(1) Depending on the model (see page 16).

Functions

In addition to the functions usually available on this type of drive, the Altivar 12 drive also features the following:

Application functions (1)

- Switching between local control and control via the terminals
- Motor control profiles: standard, performance and pump/fan
- Frequency skip
- Preset speeds
- PID regulator
- S ramp, U ramp, ramp switching
- Freewheel stop, fast stop
- Jog operation
- Configuring the logic and analog I/O
- Underload and overload detection
- Viewing the state of the logic inputs on the drive display
- Configuring how the parameters are displayed
- Error log, etc.

Functions for pumping applications

- Sleep/wake-up
- PID functions
- Protection functions :
 - Protection against overloads and overcurrents in continuous operation (pump jamming)
 - Machine mechanical protection with control of operating direction
 - Protection of the installation by means of underload and overload detection

An optimized offer

The Altivar 12 range of variable speed drives extends across a range of motor power ratings from 0.18 kW/0.25 HP to 4 kW/5 HP on three types of power supply: Two standard versions are available:

- Drive with heatsink for normal environments and fan-cooled enclosure:
 - 100...120 V single-phase, 0.18 kW/0.25 HP to 0.75 kW/1 HP (ATV12H●●●F1)
 - 200...240 V single-phase, 0.18 kW/0.25 HP to 2.2 kW/3 HP (ATV12H●●●M2)
 - 200...240 V three-phase, 0.18 kW/0.25 HP to 4 kW/5 HP (ATV12H●●●M3)
- Drive on a base plate for mounting on the machine frame; the frame surface area should allow heat to dissipate:
 - 100...120 V single-phase, 0.18 kW/0.25 HP to 0.37 kW/0.5 HP (ATV12H018F1, P037F1)
 - 200...240 V single-phase, 0.18 kW/0.25 HP to 0.75 kW/1 HP (ATV12H018M2, P●●●M2)
 - 200...240 V three-phase, 0.18 kW/0.25 HP to 4 kW/5 HP (ATV12H018M3, P●●●M3)

Note: The Altivar 12 drive output voltage is 200...240 V three-phase, regardless of the type of drive line supply.

The Altivar 12 drive integrates as standard the Modbus communication protocol, which can be accessed via the RJ45 connector located on the underside of the drive 1 with a 2-wire RS 485 physical interface. To communicate on the network, the Altivar 12 speed drive uses the Modbus RTU transmission mode. For more information on the complementary characteristics of the Modbus port (transmission speed, address, messaging...), please consult our website www.schneider-electric.com.

The entire range conforms to international standards IEC/EN 61800-5-1 and IEC/EN 61800-3, is UL, CSA, C-Tick, NOM, GOST certified and has been developed to meet the requirements of directives regarding the protection of the environment (RoHS, WEEE) as well as those of European Directives to obtain the CE mark.

(1) For the implementation of functions please consult the user manual on our website www.schneider-electric.com.

ATV12H075M2 with door on front panel open

Multi-Loader configuration tool

Remote terminal with cover closed

Remote terminal with cover open: RUN, FWD/REV and STOP buttons accessible

An optimized offer (continued)

Electromagnetic compatibility (EMC)

The integration of a level C1 EMC filter in ATV12●●●●M2 drives and the handling of EMC simplify installation and make it very inexpensive to bring the device into conformity to obtain the CE mark.

This EMC filter can be disconnected via an internal switch 1.

This filter is conform to the IEC61800-3 standard, environnement 1, categories C1 and C2 depending on the model and on the motor cable length (see pages 16 et 17).

ATV12●●●●F1 and ATV12●●●●M3 drives are designed without an EMC filter. Filters are available as an option and can be installed by the customer to reduce the level of emissions (see page 18). The ATV12●●●●M2 speed drives can also have an additional filter (see page 19).

External accessories and options

External accessories and options can be used with Altivar 12 drives:

- EMC conformity kits, plates for direct mounting on 35 mm/1.38 in U_r rail, etc.
- Motor chokes, additional EMC input filters, etc.

Dialogue and configuration tools

Human-Machine Interface (HMI)

The 4-digit display 2 can be used to display states and faults, access parameters and modify them via the navigation button 3.

The RUN and STOP buttons 4 can be made accessible on the front panel by removing the blanking plate 5 from the door; they must be configured in order to be active.

Simple Loader and Multi-Loader configuration tools

The Simple Loader tool enables one powered-up drive's configuration to be duplicated on another powered-up drive.

The Multi-Loader tool enables configurations from a PC or drive to be copied and duplicated on another drive; the drives do not need to be powered up.

SoMove setup software

The SoMove setup software can be used with the Altivar 12 drive for configuration, adjustment, debugging (using the Oscilloscope function) and maintenance, just as it can for all other Schneider Electric variable speed drives and starters. It can also be used to customize the integrated display terminal menus. It can be used with a direct connection or a Bluetooth® wireless connection.

Remote display terminal

The Altivar 12 drive can be connected to a remote display terminal, available as an option. This terminal can be mounted on an enclosure door with IP 54 or IP 65 degree of protection. The maximum operating temperature is 50°C. It provides access to the same functions as the Human-Machine interface.

Complementary characteristics

The following characteristics complement those introduced in the selection guide on pages 6 to 9.

Environmental conditions

- IEC 60721-3-3 classes 3C3 and 3S2

Ambient air temperature around the device in operation

- For ATV12H018F1, H037F1, H018M2...H075M2, H018M3...H075M3 and ATV12P●●●● :

- From -10°C to +40°C without derating
- Up to +60°C, with the protective blanking cover removed and current derating of 2% per additional degree (1)

- For ATV12H075F1, 12HU15M2, HU22M2, 12HU15M3...HU40M3 :

- From -10°C to +50°C without derating
- Up to +60°C, with the protective blanking cover removed and current derating of 2% per additional degree (1)

(1) See the derating curves in the User Manual, available on our website at "www.schneider-electric.com".

Complementary characteristics (continued)**Analog input AI1**

- Voltage analog input: 0...5 V $\overline{\text{DC}}$ (internal power supply only) or 0...10 V $\overline{\text{DC}}$, impedance 30 k Ω
 - Analog current input: X-Y mA by programming X and Y from 0...20 mA, impedance 250 Ω
- Sampling time: < 10 ms
Resolution: 10 bits
Accuracy: $\pm 1\%$ at 25°C
Linearity: $\pm 0.3\%$ of the maximum scale value
Factory setting: Input configured as voltage type

Analog output AO1

- 1 software-configurable voltage or current analog output:
- Analog voltage output: 0...10 V $\overline{\text{DC}}$, minimum load impedance 470 Ω
 - Analog current output: 0 to 20 mA, maximum load impedance 800 Ω
- Update time: < 10 ms
Resolution: 8 bits
Accuracy: $\pm 1\%$ at 25°C

Relay outputs R1A, R1B, R1C

- 1 protected relay output, 1 N/O contact and 1 N/C contact with common point
Response time: 30 ms maximum
Minimum switching capacity: 5 mA for 24 V $\overline{\text{DC}}$
Maximum switching capacity:
- On resistive load ($\cos \varphi = 1$ and L/R = 0 ms): 3 A at 250 V \sim or 4 A at 30 V $\overline{\text{DC}}$
 - On inductive load ($\cos \varphi = 0.4$ and L/R = 7 ms): 2 A at 250 V \sim or 30 V $\overline{\text{DC}}$

Logic inputs LI1...LI4

- 4 programmable logic inputs, compatible with PLC level 1, standard IEC/EN 61131-2
24 V $\overline{\text{DC}}$ internal power supply or 24 V $\overline{\text{DC}}$ external power supply (min. 18 V, max. 30 V)
Sampling time: < 20 ms
Sampling time tolerance: ± 1 ms
Factory-set with 2-wire control in "transition" mode for machine safety reasons:
- LI1: forward
 - LI2...LI4: not assigned
- Multiple assignment makes it possible to configure several functions on one input (for example: LI1 assigned to forward and preset speed 2, LI3 assigned to reverse and preset speed 3)
Impedance 3.5 k Ω

Logic outputs LO+, LO-

- One 24 V $\overline{\text{DC}}$ logic output assignable as positive logic (Source) or negative logic (Sink) open collector type, compatible with level 1 PLC, standard IEC/EN 61131-2
Maximum voltage: 30 V
Linearity: $\pm 1\%$
Maximum current: 10 mA (100 mA with external power supply)
Impedance: 1 k Ω
Update time: < 20 ms

(1) These values are given for a nominal switching frequency of 4 kHz, for use in continuous operation. If operation above 4 kHz needs to be continuous, the nominal drive current should be derated by 10% for 8 kHz, 20% for 12 kHz and 30% for 16 kHz.
The switching frequency can be set between 2 and 16 kHz for all ratings.
Above 4 kHz, the drive will reduce the switching frequency automatically in the event of an excessive temperature rise. See the derating curves in the User Manual, available on our website at "www.schneider-electric.com".

(2) Typical value for the indicated motor power and for the maximum prospective line lsc.

(3) Weight of product without packaging.

(4) Min. (U1) and max. (U2) nominal supply voltage: 100 (U1)...120 V (U2), 200 (U1)...240 V (U2).

(5) Due to the poor heat dissipation, the ATV12H018●● drive is only supplied as a base plate version.

(6) This drive is delivered with a disconnectable category C1 EMC filter. This drive complies with the IEC/EN 61800-3 standard, Environment 1 (public network), category C1, at 2, 4, 8, 12 and 16 kHz for a shielded motor cable length inferior or equal to 5 m.

(7) Complies with the IEC/EN 61800-3 standard, Environment 1 (public network), category C2, from 2 to 12 kHz for a shielded motor cable length inferior or equal to 5 m; and at 2, 4, 8, 12 and 16 kHz for a shielded motor cable length inferior or equal to 10 m.

(8) Complies with the IEC/EN 61800-3 standard, Environment 1 (public network), category C2, from 4 to 16 kHz for a shielded motor cable length inferior or equal to 5 m; and at 2, 4 and 16 kHz for a shielded motor cable length inferior or equal to 10 m.

(9) Available in lots of 7: add **TQ** at the end of the reference. ATV12HU22M2 becomes **ATV12HU22M2TQ**.

(10) Available in lots of 14: add **TQ** at the end of the reference. For example, ATV12H018M2 becomes **ATV12H018M2TQ**.

(1) The filter choice table gives the maximum lengths of the shielded cables between the motors and the drives. These maximum lengths are given for indication because they depend on the motor properties and on the used cables. In the case of parallel motors, the total addition of the lengths must be taken into account.

(2) IEC 61800-3 standard : EMC immunity and EMC conducted and radiated emissions :

- categories C1 et C2 : public network
- category C3 : industrial network

For further information, see the "Conducted EMC emissions" and "Radiated EMC emissions" characteristics on our website www.schneider-electric.com.

(1) Motor cable length given for a switching frequency of 4 kHz.
 (2) Please refer to the Twido programmable controller catalogue.
 (3) Cable depends on the type of controller or PLC.
 (4) Order in multiples of 2.
 (5) Depends on the bus architecture.
 (6) The content of this DVD ROM is also available on our website at "www.schneider-electric.com".

VZ3V1302

Variable speed drives

Altivar 12

Motor starters: Single-phase supply voltages
100...120 V and 200...240 V

Applications

The proposed combinations can:

- Protect people and equipment (when a short-circuit occurs)
- Maintain protection upstream of the drive in the event of a short-circuit on the power stage

Two types of combination are possible:

- Drive + circuit-breaker: Minimum combination
- Drive + circuit-breaker + contactor: Minimum combination with contactor when a control circuit is needed

Motor starters

Motor starter with single-phase power supply

(1) For a complete list of references for TeSys contactors, please refer to the "Motor starter solutions - Control and protection components" and "Motor starters up to 150 A" catalogues or visit "www.schneider-electric.com".
 (2) Motor power indicated for combination with an ATV12H●●●●● drive with the same rating. For combination with an ATV12P●●●●● drive, refer to the specific manual for the Altivar 12 base plate version, available on our website at "www.schneider-electric.com".
 (3) TeSys motor circuit-breakers:
 - GV2 ME●●: Thermal magnetic motor circuit-breakers with pushbutton control
 - GV2 L●●: Magnetic motor circuit-breakers with control by rotary knob
 (4) 2-pole C60N modular circuit-breaker
 (5) Can be integrated in devices connected to a power socket:
 - If the line current is ≤ 16 A, connection to a single-phase power socket, 10/16 A 250 V ~
 - If the line current is > 16 A, connection to a single-phase power socket conforming to standard IEC 60309

Variable speed drives

Altivar 12

Motor starters: Three-phase supply voltage
200...240 V

Combinations of C60N circuit-breakers/Vigi C60 add-on modules

C60N 2-pole/4-pole	Vigi C60		
Rating (A)	Rating (A)	Type (5)	Sensitivity
6	25	A "si"	30 mA
10	25	A "si"	30 mA
16	25	A "si"	30 mA
20	25	A "si"	30 mA
32	40	A "si"	30 mA

Recommendations for special uses:

- All RH10/RH21/RH99/RHU residual current protection devices with separate sensors are compatible as long as the type and sensitivity of the add-on modules given in the table above are observed.
- It is advisable to connect one RCD (residual current device) per drive. In this case, a type B RCD must not be located downstream of a type A or AC RCD.

(1) For a complete list of references for TeSys contactors, please refer to the "Motor starter solutions - Control and protection components" and "Motor starters up to 150 A" catalogues or visit "www.schneider-electric.com".

(2) Motor power indicated for combination with an ATV12H drive with the same rating. For combination with an ATV12P drive, refer to the specific manual for the Altivar 12 base plate version, available on our website at "www.schneider-electric.com".

(3) TeSys motor circuit-breakers:

- GV2ME: Thermal magnetic motor circuit-breakers with pushbutton control
- GV2L: Magnetic motor circuit-breakers with control by rotary knob

(4) 4-pole C60N modular circuit-breaker

(5) For additional protection against direct contact, with a three-phase power supply and access to the DC bus terminals (PA/+ and PC/-), the add-on module must be type B with a sensitivity of 30 mA.
